

QATESOL Presentation – Saturday 20 May 2017

Making screencast videos for teaching, learning, and feedback

A screencast is a video recording of what is on the computer screen, enhanced with audio narration. In education it is being used in many ways, such as,

- talking through a website, your online course resources, your Powerpoint slides, or anything else
- using video to provide enhanced and personalised feedback to students on their writing
- explaining concepts and illustrate with drawings, images, etc., so learners can watch many times if needed
- getting students to create their own screencasts, such as for digital storytelling

Lesley will elaborate on and provide examples of each of these ideas and others, and assist teachers to learn basic techniques for screencasting using mobile tablet apps. Bring along your ideas for using screencasting, or discover screencasting as a solution to a problem

Lesley Cioccarelli has taught English to adult migrants and refugees for over 10 years. She has also worked in e-learning, providing professional development and support for teachers at CIT, and running projects to trial and implement new technologies for teaching and learning. Now, as Cultural Diversity Coordinator at Canberra Institute of Technology (CIT), she provides support of all kinds to migrant and refugee students in mainstream VET courses, and supports teachers in dealing with the diverse needs of their learners.

Lesley has been a member of the ATESOL ACT Committee, an ATESOL ACT Past President and ACTA Councillor.

Many of us already know Lesley as a leader and champion in innovation and using new technologies for TESOL teaching and professional development. She's involved in many initiatives, including facilitation of the ACTA Adult ESOL Interest Group and AusELT Facebook pages.
